

Iodine Technology FAQ

What is Iodine?

Iodine technology utilizes artificial intelligence to review clinical records, data and documentation. By electronically scanning every case continually in real time, Iodine prioritizes cases with opportunity for improvement, ensuring clinical documentation specialists spend their valuable time reviewing the right cases at the right times.

As a physician, will this technology impact my direct workflow?

No. CDI staff are the only users to interact directly with the new technology. The query process and interaction with CDI team members will not change. While Iodine will not directly impact your workflow, you may see an increase in the number of CDI queries you receive.

When will this software be implemented?

Go live became effective on Oct. 17, 2017.

Why is this initiative important to INTEGRIS?

Improving documentation accuracy results in numerous benefits.

- Improves effective communication between care providers
- Reflects accurate case mix and DRG reimbursement
- Reflects accurate severity of illness and risk of mortality reporting
- Improves risk adjusted Value Based Purchasing metrics

Please do not hesitate to contact your CDI team for further information or to have your questions answered.
